### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION*****Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/02/06 has been entered.

***Response to Arguments***

2. Applicant's arguments filed 11/2/06 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 3, 12, 13, 14, 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang (6,379,379). Wang disclose a stent graft comprising a stent (44) with grafts (46), wherein the grafts include a vessel wall irritant (col. 7, lines 5-21 and col. Lines 20-57) and the stent-graft is self-expandable or balloon expandable tubular member (col. 2, line 66 to col. 3, line 4).

*Claim Rejections - 35 USC § 103*

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang '379. Wang discloses all the limitations of the claims except fails to disclose a stent-graft being a bifurcated stent-graft and the wall irritant being selected from the groups as listed in claim 4. Modify or make a stent-graft having a bifurcated configuration is well known in the art for treating bifurcated in vessel system and the bioadhesive material as claimed in claim 4 are also well known in the art. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Wang's stent having bifurcated configuration in order to treat a bifurcated area in a vessel system.

Regarding claim 4, it would have been obvious matter of design choice to use the bioadhesive material as claimed for Wang's stent graft since applicant has not disclosed using those specific materials for solving any stated problem or for any particular purpose, it appears that the bioadhesive materials as claimed would perform equally well as bioadhesive materials disclosed by Wang.

A limitations of the claimed combination which presented no novel or unexpected result over a similar feature used in the prior art references, and solved no stated problem, was held to be an obvious matter of design choice within the skill of the art.
